

QUESTION

What are the best ways to review Revit Warnings?

ANSWER

Scrolling through the list of warning in the dialog box can sometimes be a little tedious, especially if there are lots of warnings!

Exporting the list of warnings to an *.html makes it easier to view, and shared! This list will include the Revit ID which helps in locating the warning.

Error message	Elements
Multiple Rooms are in the same enclosed region. The correct area and perimeter will be assigned to one Room and the others will display "Redundant Room." You should separate the regions, delete the extra Rooms, or move them into different regions.	Rooms : Room : Room 1 - Number 1 : id 355856 Rooms : Room : Room 2 - Number 2 : id 355859

3RD PARTY ADD-INS

There are many 3rd party add-ins for the Revit platform that help with warning tracking and managing warning. Some are free to download while others have a cost.

To view available add-ins please view the AutoDesk app store: <https://apps.autodesk.com/RVT/en/Home/Index>

A few add-ins we like for warnings.

- Ideate Explorer
- Kiwi Codes
- BIM One / Case Tools
- Unifi
- CCTools
