

QUESTION

Is the location of a point cloud maintained when unloading and reloading?

ANSWER

Yes! The position of the point cloud is maintained when unloading and reloading. If you remove, you will need to relink and choose a new position.

If you have a new version of a link, use the “reload from” option to choose a file with a different name or in a different folder location. As long as the origin is the same in the updated file, the link will remain in the same location.
