

## QUESTION

Help!!! In Revit 2021 and 2022 my families are missing! How do I get them back?

## ANSWER

Starting with Revit 2021, Autodesk decided **NOT** to install all the Revit families on your local computer. Crazy. I know. See screen capture below.

The good news is the families are still available! You can download the families here.

## Revit 2022 Content Revit 2021 Content

Once you've downloaded the families you can copy to the default location which is: <u>C:\ProgramData\Autodesk\RVT 202#\Libraries\English-Imperial</u>

**NEW COMMAND!** -Autodesk also introduced a new command called **"Load Autodesk Family"**. This gives you access to all the same families and allows you to insert them into your project.

This command has a nice new interface and downloads the families from one of Autodesk servers. I guess this will allow Autodesk to make new content available immediately for everyone. (I just hope they do that and let us know when new content is available.)

I like the new interface. I think it would be nice if we could customize it to make our "custom" content available there as well. It doesn't look like it is possible. I looked at the revit.ini file and did a quick search of the windows registry to see if there is a path we could change but came up empty.

Here's a link to the Autodesk knowledge base about missing content. <u>https://knowledge.autodesk.com/support/revit-products/troubleshooting/caas/sfdcarticles/sfdcarticles/Revit-Templates-and-families-not-installed.html</u>
